

2021

In May 2021 over 80,000 developers told us how they learn and level up, which tools they’re using, and what they want.

[Read the overview →](#)

[Methodology →](#)

Overview

The questions we ask in our annual survey will help us improve the Stack Overflow community and the platform that serves them.

This year, for example, we observed a significant evolution in the way developers educate themselves. For the rising cohort of coders under the age of 18, online resources like videos and blogs are more popular than books and school combined, a statistic that doesn't hold for any of our other age cohorts. Overall, the profession is full of new joiners, with more than 50% indicating they have been coding for less than a decade, and more than 35% having less than five years in the trade.

The challenge and opportunity for us is to continue expanding and improving our ability to help all developers and to make them feel welcome in our community.

Read on for more great insights about the attitudes, tools, and environments that are shaping the art and practice of software today.

It is no surprise that almost 60% of respondents learned how to code from online resources. Younger respondents tend to learn from online courses, forums, and other online resources. Older respondents, on the other hand, learned from more traditional mediums like school and books.

Learning how to code →

AWS maintains its lead as the most widely used cloud platform, but Google Cloud and Microsoft Azure made substantial gains from last year. It is worth noting that this is the first year that we broke out cloud platforms from our general platforms question.

Cloud platforms →

This year, React.js surpassed jQuery as the most commonly used web framework.

Web frameworks →

Newcomer Svelte takes the top spot as the most loved framework. React is the most wanted, desired by one in four developers.

Web frameworks →

Perl moves from being the highest-paid language last year to the fifth highest-paid this year. Clojure developers have the highest median salary, 14k more than second place which belongs to F#.

Top paying technologies →

81% of professional developers are employed full-time, a decrease from 83% in 2020. The percentage of professional developers saying they were independent contractors, freelancers, or self-employed increased from 9.5% in 2020 to 11.2% in 2021 - indicating potential job insecurity or a shift to more flexible work arrangements.

Key territories

Stack Overflow serves the international community, and our survey received responses from almost every country on Earth.

Geography

The United States and India continue to provide the highest volume of survey responses, followed by Germany and UKI (UK and Ireland). The top ten countries account for almost 60% of all respondents. To see the top ten countries, refer to the methodology section. When we zoom into the United States (our top-responding country), we see that the states with established tech hubs have the most respondents: California, New York, Washington, and Texas.

Experience

Senior executives and managers tend to have the most years of coding experience, while those working in data science and machine learning tend to have the least, on average less than even an academic researcher.

Writing that first line of code

Coders start young: over 50% of respondents wrote their first line of code between the ages of 11 to 17.

Technology

Each year we explore the tools and technologies developers are currently using. And, as always, we ask them what technologies are most Loved, Dreaded, and Wanted across several categories.

This year we also introduced a new section, Worked With vs. Want to Work With, which shows us precisely what developers used in the past year and what they want to work on in the following year. If you need a refresher on how we structure Loved, Dread and Wanted, or if you want to read about the intuition behind Worked With vs. Want to Work With, check out this post [our meta post](#).

Most loved, dreaded, and wanted

Rust reigns supreme as most loved. Python and Typescript are the languages developers want to work with most if they aren't already doing so.

Programming, scripting, and markup languages

For the sixth-year, Rust is the most loved language, while Python is the most wanted language for its fifth-year.

Loved vs. Dreaded

Want

82,914 responses

 Which **programming, scripting, and markup languages** have you done extensive development work in over the past year, and which do you want to work in over the next year? (If you both worked with the language and want to continue to do so, please check both boxes in that row.)

Databases

Redis is in its fifth year as the most loved database. PostgreSQL barely passes MongoDB with less than a percent as the most wanted database. And IBM DB2 is on its second year in a row as the most dreaded database.

Loved vs. Dreaded

Want

72,517 responses

 Which **database environments** have you done extensive development work in over the past year, and which do you want to work in over the next year? (If you both worked with the database and want to continue to do so, please check both boxes in that row.)

Platforms

AWS is leading as not only the most loved cloud platform but also the most wanted.

Loved vs. Dreaded

Want

60,516 responses

Employment

We see a greater percentage of respondents working part time or in school, while those indicating full time employment decreased. This may reflect the effects of the pandemic, which saw workers from all industries stepping back and reevaluating their relationship to full and in-person employment.

Employment status

81% of professional developers are employed full-time, a decrease from 83% in 2020. The percentage of professional developers saying they were independent contractors, freelancers, or self-employed increased from 9.5% in 2020 to 11.2% in 2021 - indicating potential job insecurity or a shift to more flexible work arrangements.

Salary

Salary by developer type

Across the board, engineering managers, SREs, DevOps specialists, and data engineers tend to receive the highest salaries. When focusing on the US, we see some differences at the bottom of the salary spectrum. In the US, mobile developers and educators tend to have a higher salary relative to other occupations when compared to the global developer population.

? What is your current total compensation (salary, bonuses, and perks, before taxes and deductions)? Please enter a whole number in the box below, without any punctuation. If you are paid hourly, please estimate an equivalent weekly, monthly, or yearly salary. If you prefer not to answer, please leave the box empty.

Salary and experience by developer type

Even though Engineering managers, SREs, DevOps specialist roles pay the most, we see they also have, on average, over ten years of professional experience. Data scientists or machine learning specialists are the 8th most paid but, on average, have the fewest years of experience. Designers are the lowest paid even though they have over ten years of experience on average.

Methodology

How we planned and analyzed our survey

[General →](#)[Feedback →](#)[Participants →](#)

Methodology

[Share](#)

General

This report is based on a survey of 83,439 software developers from 181 countries around the world. This is the number of responses we consider “qualified” for analytical purposes based on time spent on the full, completed survey; another approximately 172 responses were submitted but not included in the analysis because respondents spent less than three minutes on the survey.

The survey was fielded from May 25 2021 to June 15 2021.

The median time spent on the survey for qualified responses was 10.21 minutes.

Respondents were recruited primarily through channels owned by Stack Overflow. The top sources of respondents were onsite messaging, blog posts, email lists, banner ads, and social media posts. Since respondents were recruited in this way, highly engaged users on Stack Overflow were more likely to notice the prompts to take the survey over the duration of collection promotion.

As an incentive, respondents who finished the survey could opt in to a “Census” badge if they completed the survey.

Due to United States transport/export sanctions, our survey was unfortunately inaccessible to prospective respondents in Crimea, Cuba, Iran, North Korea, and Syria, due to the traffic being blocked by our third party survey software. While some respondents used VPNs to get around the block, the limitation should be kept in mind when interpreting survey results. 

Many questions were only shown to respondents based on their previous answers. For example, questions about jobs and work were only shown to those who said they were working in a job.

We asked respondents about their salary. First, we asked what currency each respondent typically used. Then we asked that respondent what their salary was in that currency and whether that salary was weekly, monthly, or yearly.

The salary question, like most on the survey, was optional. There were 46,844 respondents who gave us salary data.

We converted salaries from user currencies to USD using the exchange rate on 2021-06-16, and also converted to annual salaries assuming 12 working months and 50 working weeks.

The top approximately 2% of salaries inside and outside of the US were trimmed and replaced with threshold values. The threshold values for inside and outside the US were different.

To identify which technologies to include on the survey this year, we looked at both the most popular and fastest growing tags on Stack Overflow (in terms of questions posted). We compared these to the technologies we included last year and looked at how many people chose each option. We synthesized all this together to curate a collection of technologies to include.

The questions were organized into several blocks of questions, which were randomized in order. Also, the answers to most questions were randomized in order.
