## **Assignment 8.1**

**7.5** Prove each of the following assertions:

- a.**  $\alpha$  is valid if and only if  $\text{True} \models \alpha$ .
- b.** For any  $\alpha$ ,  $\text{False} \models \alpha$ .
- c.**  $\alpha \models \beta$  if and only if the sentence  $(\alpha \Rightarrow \beta)$  is valid.
- d.**  $\alpha \equiv \beta$  if and only if the sentence  $(\alpha \Leftrightarrow \beta)$  is valid.
- e.**  $\alpha \models \beta$  if and only if the sentence  $(\alpha \wedge \neg \beta)$  is unsatisfiable.

**Solution:**

a)  $\alpha$  is valid and only if  $\text{True} \models \alpha$

Here,  $\text{True} \models \alpha$  means  $\text{True}$  entails  $\alpha$  if and only if  $\alpha$  is true in each model where  $\text{True}$  is true. For a statement to be valid, it must be true in every model. Hence  $\alpha$  is valid if and only if  $\text{True} \models \alpha$ .

b) For any  $\alpha$ ,  $\text{False} \models \alpha$

Here,  $\text{False} \models \alpha$  means  $\text{False}$  entails  $\alpha$  if and only if in every model where  $\text{False}$  is true,  $\alpha$  must be true. Since  $\text{False}$  is false in every model, for any  $\alpha$ ,  $\text{False} \models \alpha$ .

c)  $\alpha \models \beta$  if and only if sentence  $\alpha \Rightarrow \beta$  is valid.

Now,  $\alpha \Rightarrow \beta = \text{true}$

(given)

$\neg(\alpha) \cup \beta = \text{true}$

(implication elimination)

$\neg(\text{true}) \cup \beta = \text{true}$

$\text{False} \cup \beta = \text{true}$

$\beta$  is true in  $m$

(semantics of  $\cup$ )

Thus, if  $\alpha \Rightarrow \beta$  then  $\alpha \models \beta$

Now,

$\alpha \models \beta$  is given

$\alpha \models \beta$  means  $\alpha$  entails  $\beta$  if and only if in every model where  $\alpha$  is true,  $\beta$  must be true.

Let  $M = M1 \cup M2$

For all  $m \in M$ ,

Where for  $M2$ ,  $\alpha = \text{False}$  and for  $M1$ ,  $\alpha = \text{true}$

For every  $m \in M1$ ,  $\alpha$  is true in  $m$ ,  $\beta$  is true in  $m$

$\alpha \Rightarrow \beta \equiv \neg \alpha \cup \beta$

$\equiv \text{False} \cup \text{True}$

$\equiv \text{True}$

(semantics of  $\cup$ )

For every  $m \in M2$ ,  $\alpha$  is False in  $m$ ,  $\beta$  is False in  $m$

$\alpha \Rightarrow \beta \equiv \neg \alpha \cup \beta$

$\equiv \text{True} \cup \text{False}$

$\equiv \text{True}$  (Semantics of  $\cup$ )

Therefore, if  $\alpha \models \beta$ , then  $\alpha \Rightarrow \beta$  is true

Thus,  $\alpha \models \beta$  if and only if sentence  $\alpha \Rightarrow \beta$  is valid.

d)  $\alpha \equiv \beta$  if and only if the sentence  $(\alpha \Leftrightarrow \beta)$  is valid.

$\alpha \equiv \beta$

(given)

According to definition of logical equivalence,  $\alpha \equiv \beta$ , if they are true in the same set of models.

i.e.,  $\alpha \equiv \beta$  then  $\alpha \models \beta$  and  $\beta \models \alpha$

now if  $\alpha \models \beta$ ,  $\alpha \Rightarrow \beta$

and if  $\beta \models \alpha$ ,  $\beta \Rightarrow \alpha$

as  $\alpha \Rightarrow \beta$  is true and  $\beta \Rightarrow \alpha$  is true by definition,  $\alpha \Leftrightarrow \beta$  is true

Thus if  $\alpha \equiv \beta$ ,  $(\alpha \Leftrightarrow \beta)$  is valid.

$(\alpha \Leftrightarrow \beta)$

(given)

$(\alpha \Rightarrow \beta) \wedge (\beta \Rightarrow \alpha)$

(Biconditional elimination)

Thus,  $\alpha \models \beta$  and  $\beta \models \alpha$  i.e.,  $\alpha \equiv \beta$

So, we can say that  $\alpha \equiv \beta$  if and only if the sentence  $(\alpha \Leftrightarrow \beta)$  is valid.

e)  $\alpha \models \beta$  if and only if the sentence  $(\alpha \wedge \neg \beta)$  is valid.

$\alpha \models \beta$  is true if and only if  $\alpha \Rightarrow \beta$

$\alpha \models \beta$  (given)

$\alpha \Rightarrow \beta = \text{true}$

$(\neg \alpha \vee \beta) = \text{true}$

(implication elimination)

$\neg(\neg \alpha \vee \beta) = \neg(\text{true})$

( $\neg$  on both side)

$(\alpha \wedge \neg \beta) = \text{false}$

(De Morgan)

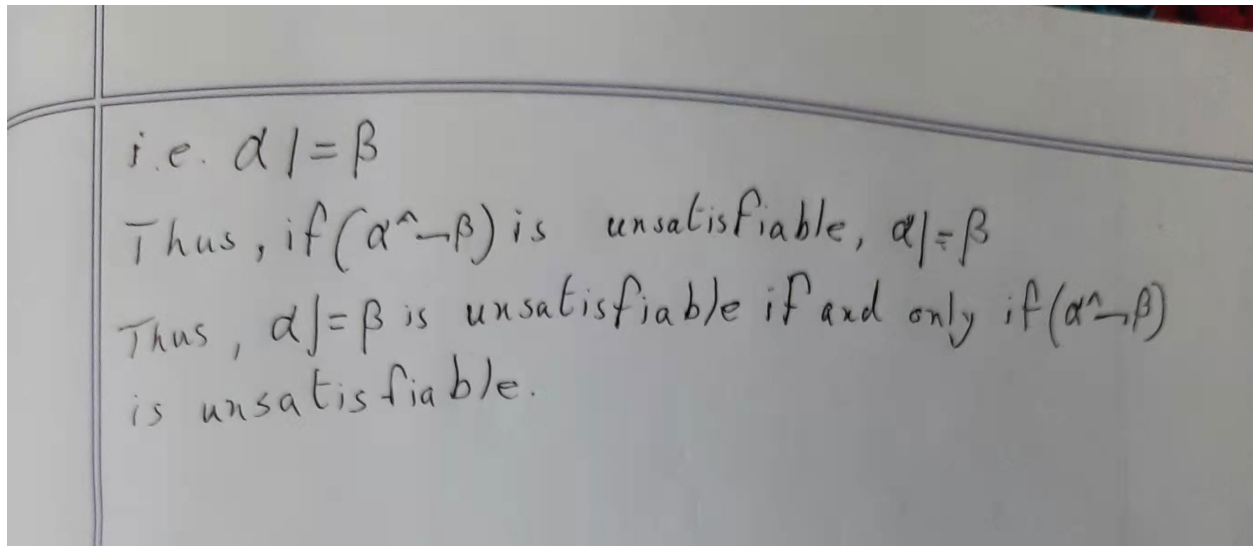

Thus, if  $\alpha \models \beta$  then  $(\alpha \wedge \neg \beta)$  is unsatisfiable

Now,  $(\alpha \wedge \neg \beta) = \text{false}$  (given)

$\neg(\alpha \wedge \neg \beta) = \neg(\text{false})$

$(\neg \alpha \vee \beta) = \text{true}$

$\alpha \Rightarrow \beta = \text{true}$

**7.10** Decide whether each of the following sentences is valid, unsatisfiable, or neither. Verify your decisions using truth tables or the equivalence rules of Figure 7.11 (page 249).

- a.  $\text{Smoke} \Rightarrow \text{Smoke}$
- b.  $\text{Smoke} \Rightarrow \text{Fire}$
- c.  $(\text{Smoke} \Rightarrow \text{Fire}) \Rightarrow (\neg \text{Smoke} \Rightarrow \neg \text{Fire})$
- d.  $\text{Smoke} \vee \text{Fire} \vee \neg \text{Fire}$
- e.  $((\text{Smoke} \wedge \text{Heat}) \Rightarrow \text{Fire}) \Leftrightarrow ((\text{Smoke} \Rightarrow \text{Fire}) \vee (\text{Heat} \Rightarrow \text{Fire}))$
- f.  $(\text{Smoke} \Rightarrow \text{Fire}) \Rightarrow ((\text{Smoke} \wedge \text{Heat}) \Rightarrow \text{Fire})$
- g.  $\text{Big} \vee \text{Dumb} \vee (\text{Big} \Rightarrow \text{Dumb})$

**Solution:**

a)  $\text{smoke} \Rightarrow \text{smoke}$

smoke	$\text{smoke} \Rightarrow \text{smoke}$
True	True
False	True

Thus, statement is valid as it is true in all models.

b)  $\text{smoke} \Rightarrow \text{fire}$

smoke	fire	$\text{smoke} \Rightarrow \text{fire}$
True	True	True
True	False	False
False	True	True
False	False	True

Hence, the statement can be true and can be false, it is neither satisfiable nor unsatisfiable.

$$\begin{aligned}
 & c) (\text{smoke} \Rightarrow \text{fire}) \Rightarrow (\neg \text{smoke} \Rightarrow \neg \text{fire}) \\
 & (\neg \text{smoke} \vee \text{fire}) \Rightarrow (\text{smoke} \vee \neg \text{fire}) \quad (\text{implication elimination}) \\
 & \neg(\text{smoke} \vee \text{fire}) \vee (\text{smoke} \vee \neg \text{fire}) \quad (\text{implication elimination}) \\
 & (\neg \text{smoke} \wedge \neg \text{fire}) \vee (\text{smoke} \vee \neg \text{fire}) \quad (\text{De Morgan}) \\
 & (\neg \text{smoke} \vee \text{smoke} \vee \neg \text{fire}) \wedge (\neg \text{fire} \vee \text{smoke} \vee \neg \text{fire}) \quad (\text{Distribution of } \vee \text{ over } \wedge) \\
 & \text{True} \wedge (\neg \text{fire} \vee \text{smoke}) \quad \{ \quad (\text{Semantics of } \vee) \\
 & \neg \text{fire} \vee \text{smoke} \quad \quad \quad (\text{Semantics of } \wedge)
 \end{aligned}$$

fire	smoke	$\neg \text{fire}$	$\neg \text{fire} \vee \text{smoke}$
True	True	False	True
True	False	False	False
False	True	True	True

False	False	True	True
-------	-------	------	------

Hence, the statement can be true and can be false, it is neither satisfiable nor unsatisfiable.

$$d) \text{ smoke } \vee \text{ fire } \vee \neg \text{ fire}$$

$$\text{smoke } \vee \text{ True}$$

(semantics of  $\vee$ )

$$\text{True}$$

(semantics of  $\vee$ )

Hence, as the statement is true for all models, it is valid.

$$\begin{aligned} e) & \{ (\text{smoke} \wedge \text{heat}) \Rightarrow \text{fire} \} \Leftrightarrow \{ (\text{smoke} \Rightarrow \text{fire}) \vee (\text{heat} \Rightarrow \text{fire}) \} \\ & (\neg(\text{smoke} \wedge \text{heat}) \vee \text{fire}) \Leftrightarrow ((\neg \text{smoke} \vee \neg \text{heat}) \vee \text{fire}) \quad (\text{implication elimination}) \\ & (\neg \text{smoke} \vee \neg \text{heat} \vee \text{fire}) \Leftrightarrow (\neg \text{smoke} \vee \neg \text{heat} \vee \text{fire}) \quad (\text{De Morgan}) \\ & (\neg \text{smoke} \vee \neg \text{heat} \vee \text{fire}) \Leftrightarrow (\neg \text{smoke} \vee \neg \text{heat} \vee \text{fire}) \quad (\text{semantics of } \vee) \\ & ((\neg \text{smoke} \vee \neg \text{heat} \vee \text{fire}) \Leftrightarrow (\neg \text{smoke} \vee \neg \text{heat} \vee \text{fire})) \quad (\text{Biconditional elimination}) \\ & ((\neg \text{smoke} \vee \neg \text{heat} \vee \text{fire}) \Rightarrow (\neg \text{smoke} \vee \neg \text{heat} \vee \text{fire})) \end{aligned}$$

$$(\text{True}) \wedge (\text{True})$$

$$\text{True}$$

( $a \Rightarrow a$  is True)

(semantics of  $\wedge$ )

Hence, as the statement is true for all models, it is valid.

$$\begin{aligned} f) & (\text{smoke} \Rightarrow \text{fire}) \Rightarrow ((\text{smoke} \wedge \text{heat}) \Rightarrow \text{fire}) \quad (\text{implication elimination}) \\ & (\neg \text{smoke} \vee \text{fire}) \Rightarrow (\neg(\text{smoke} \wedge \text{heat}) \vee \text{fire}) \quad (\text{De Morgan}) \\ & (\neg \text{smoke} \vee \text{fire}) \Rightarrow (\neg \text{smoke} \vee \neg \text{heat} \vee \text{fire}) \quad (\text{implication elimination}) \\ & \neg(\neg \text{smoke} \vee \text{fire}) \vee (\neg \text{smoke} \vee \neg \text{heat} \vee \text{fire}) \quad (\text{De Morgan}) \\ & (\text{smoke} \wedge \neg \text{fire}) \vee (\neg \text{smoke} \vee \neg \text{heat} \vee \text{fire}) \quad (\text{Distribution of } \vee) \\ & (\text{smoke} \vee (\neg \text{smoke} \vee \neg \text{heat} \vee \text{fire})) \wedge (\neg \text{fire} \vee (\neg \text{smoke} \vee \neg \text{heat} \vee \text{fire})) \quad (\text{Associativity of } \vee) \\ & ((\text{smoke} \vee \neg \text{smoke}) \vee \neg \text{heat} \vee \text{fire}) \wedge ((\neg \text{fire} \vee \neg \text{smoke}) \vee \neg \text{heat}) \quad (\text{semantics of } \vee) \\ & (\text{True} \vee \neg \text{heat} \vee \text{fire}) \wedge (\text{True} \vee \neg \text{smoke} \vee \neg \text{heat}) \quad (\text{semantics of } \vee) \\ & (\text{True}) \wedge (\text{True}) \quad (\text{semantics of } \vee) \end{aligned}$$

$$\text{True}$$

Hence, as the statement is true for all models, it is valid.

g)  $\text{big} \vee \text{dumb} \vee (\text{big} \Rightarrow \text{dumb})$

$\text{big} \vee \text{dumb} \vee (\neg \text{big} \vee \text{dumb})$

$\text{big} \vee \neg \text{big} \vee (\text{dumb} \vee \text{dumb})$

$\text{True} \vee \text{dumb}$

True

True

Hence, as the statement is true for all models, it is valid.

(implication elimination)

(Associativity of  $\vee$ )

(semantics of  $\vee$ )

(semantics of  $\vee$ )
